## AMG Medtech Limited to Partner with San Francisco-Based Arterys

AMG Medtech is pleased to announce a new partnership with Arterys Inc, based in San Francisco, USA. Arterys is one of the world's leading developers of Artificial Intelligence (AI) for precision medicine and has more than \$70 Million to fund the development of their solutions.

A R T E R Y S

Arterys has CE-marked premium AI solutions, including their Cardio, Lung, Neuro and Chest|MSK AI applications. They have an extensive roadmap to add many more apps to their platform.

Arterys has created an open cloud-based AI platform for radiology. Apps plug into this platform and are immediately available to connected clinics. Developers around the world can deploy their AI algorithms through the Arterys Marketplace.

“At Arterys, we are ambitious about making AI more easily available to healthcare professionals and institutions. We have developed a number of radiology algorithms supported by world leading infrastructure, which can significantly reduce the workload for radiologists in hospitals and improve patient outcome,” says Stephane Boyer, General Manager at Arterys Europe. “We have decided to team-up with AMG Medtech to handle our sales and marketing effort in the UK and Ireland, and to capitalise on their in-depth experience, local knowledge and network.”

### **Faster and future proof access to AI support**

Incorporating AI into data-driven healthcare specialties, such as radiology, can have great socio-economic impacts. However, integration and scalability in clinical use are major barriers. Arterys has developed a 100% cloud-based AI platform, which integrates seamlessly into hospital's RIS/PACS systems, which includes instinctive support for the radiologist. To comply with comprehensive regulatory demands, Arterys software anonymizes data and has achieved full GDPR compliance for its AI and cloud. The platform offers true scalability and “fast track” for the use of AI in radiology, especially for the NHS and private healthcare market.

“AI can provide doctors with enhanced information on a patient's condition and the COVID crisis has pioneered the growth of healthcare solutions around the world. What we now encounter is healthcare systems embracing innovation to address the challenge of the pandemic and beyond. Moving forward, it's critical to continue embracing technology to improve patient care – and AI will have a huge part to play” says AMG Medtech.

### **About Arterys**

Arterys is the market leader as the world's first and only internet platform for medical imaging. Our objective is to transform healthcare by transforming radiology. The Arterys platform is 100% web-based, AI-powered and FDA cleared, unlocking simple solutions that require only a web browser and an internet connection. <https://arterys.com/>

### **About AMG Medtech**

AMG Medtech is a specialist consultancy service and offers distribution of medical AI technologies across the UK, Ireland and Europe. Our team brings over 18 years of experience and expertise in medical imaging, cardiology and radiotherapy. We understand workflows and how to scale them for different departments and across geographical networks, so that you can deliver quality treatment with efficiency and consistency. AMG Medtech understand the challenges hospitals and cancer clinics face every day with limited resources, such as a lack of trained staff, or overwhelming clinician workloads. This inadvertently takes a toll on patient care and treatment. We're excited to bring the advantages of AI into healthcare to reduce the number of routine tasks for clinicians and to raise the standard of care.
