

MVISION

Coming up:
**LYMPH
NODES**

The
**ultimate
completion**
of OAR
contouring

Optimize radiotherapy planning with MVision's state-of-art artificial intelligence (AI) contouring software.

Save time

Fully automated 3D organ models delivered in a minute as opposed to hours of manual work.

You can focus on more complex delineation tasks and stop the waste of limited resources.

Ensure conformance

We help you to follow the latest segmentation guidelines, including ESTRO and RTOG consensus guidelines. A proper standard is a must to every clinic and we implement it for you.

Improve consistency

Inter-observer variation is a known challenge in manual contouring. We replace variation with high consistency. You can finally limit adverse effects related to errors in delineation of structures.

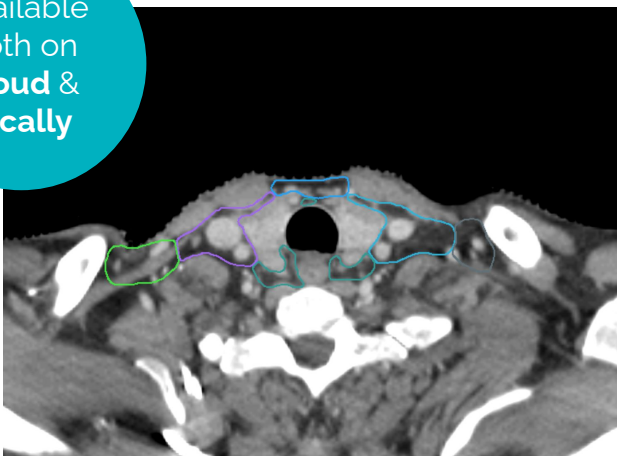

Simplify workflow

With one software and a GDPR compliant architecture, radiotherapy treatment planning has never been this simple. Web-based workflow also enables clinical decision making in real-time.

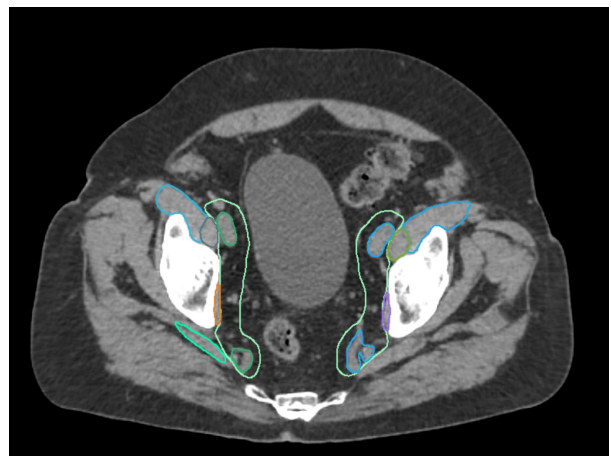

MVision's CE marked automatic segmentation modules cover all major cancer sites and **soon also lymph nodes**.

Available
both on
**cloud &
locally**

Lymph nodes - Head & Neck

Lymph nodes - Male Pelvis
